

## **Declaration of 2030 Commitment to Sustainable Raw Materials Procurement and Environmental Burden Reduction at the 2021 UN Food Systems Summit**

At the UN Food Systems Summit 2021 to be held in New York, USA, in September this year, Fuji Oil Holdings Inc. (Osaka, President & CEO: Mikio Sakai) will commit to the sustainable procurement of raw materials and to goals for 2030 that include reducing CO2 emissions, water usage, and waste, and will declare its intent to contribute to reforms aiming for sustainability in food systems.

The Food Systems Summit is an event held by the UN on the basis of Secretary-General António Guterres' belief that transitioning to sustainable food systems\* is imperative in order to achieve the SDGs. The first such international summit of its kind, it will be attended by high-level representatives from each country and will provide the venue for a debate from a systemic perspective on ensuring sustainability in food as a global issue, and will set out the ideal form that these systems should take.

As well as governmental representatives, this summit will be attended by a range of stakeholders in food systems (producers, companies, consumers, and others), and each country will outline and submit the initiatives that they will commit to with the aim of putting in place sustainable food systems.

Fuji Oil Group concurs with the aims of this summit, and as part of the commitment to be made by the Japanese government we will set the following goals and aim to create food systems that facilitate abundance and health for the planet and people, and will push forward our PBFS (Plant-Based Food Solutions).

### **Food Systems Summit 2021**

<b>Sustainable Raw Materials Procurement</b>	
Palm	100% traceability to the original plantation by 2030
	Full implementation of working environment improvement program at all suppliers to core group company Palmaju Edible Oil (Malaysia) by 2025
Cacao	Elimination of child labor in the Fuji Oil Group cacao bean and product supply chain by 2030
	Elimination of the worst forms of child labor as defined by the International Labour Organization (ILO) by 2025
	Planting of one million trees in cacao cultivation areas in consideration of biodiversity by 2030

## Environmental Vision 2030 (Base year: 2016)

CO2 emissions	Scope 1 & 2: 40% reduction	Scope 3 Category 1: 18% reduction
Water use	20% reduction in intensity	
Waste	10% reduction in intensity	
Recycling rate	Sustained 99.8% or more (Japan)

\*"Food system" refers to the series of activities involved in food production, processing, transport, and consumption. In the Scientific Group at this summit, this will be deemed to include all stakeholders across the entire scope of production, aggregation, processing, distribution, consumption, and disposal of food derived from agriculture, forestry, fishing, and food production industries as well as the value-adding activities resulting from their interaction, and the wider economy, society, and environment in which these are embedded.
